

IGU

The Intensive Gainz Unit

COACH GUIDE

Your IGU Guide for Coaches

Everything you can do on IGU as a coach, dietitian, or specialist, explained in full — every feature, step by step, with answers to the questions that come up.

Welcome to IGU

IGU (The Intensive Gainz Unit) is your command centre for coaching clients online — approving them, building their programs, guiding nutrition, running sessions, and keeping in touch. This guide explains everything you can do, in plain language with step-by-step instructions.

It is also the foundation for our in-app Help, FAQ, and Tutorial sections, and is designed to answer almost any question you have.

How to use this guide

Part 1 is the big picture. Part 2 covers every coach feature. Parts 3 and 4 are dedicated to dietitians and physiotherapists/specialists. Part 5 shows how roles change what you see, and Parts 6–8 are the FAQ, glossary, and support.

What's inside

1. How IGU works	the big picture
2. For coaches — every feature	your tools
3. For dietitians	nutrition specialists
4. For physiotherapists & other specialists	rehab & specialist care
5. How roles & plans change what you see	roles explained
6. Frequently asked questions	FAQ
7. Glossary of IGU terms	definitions
8. Getting help	support

1 How IGU works

IGU has two main kinds of people — clients and coaches — plus a behind-the-scenes admin team. As a coach, your tools and view depend on your role, your credentials, and (for clients) their plan.

The coaching roles

Every coach has a core coaching role and may hold approved specialist credentials. When a specialist joins a client's care team, they lead their area and the rest of the team works around them.

Role	What they do	Can build programs?	Leads nutrition?
Coach	Main point of contact — training and overall progress.	Yes	Yes, unless a dietitian is assigned
Dietitian	Nutrition specialist.	No	Yes (overrides the coach)
Physiotherapist	Injury, rehab, and movement.	Yes	No
Sports psychologist	Mindset, motivation, performance.	No	No
Mobility coach	Flexibility and movement quality.	Yes	If no dietitian
Head coach	A senior coach who also leads team plans.	Yes	As above

Specialists are add-on services (launching soon)

Nutrition (dietitian) and physiotherapy are launching soon as optional add-ons a client attaches to any plan — these credentials staff those add-ons. Until they launch, the core plans are coaching-only, and the coach handles training and nutrition. Parts 3 and 4 cover the dietitian and physiotherapist roles in full.

Experience levels

Coaches and dietitians also carry a professional level set by admin: Junior, Senior, or Lead. Your level reflects experience and seniority, unlocks a few permissions (Senior and Lead coaches can invite their own clients), and — importantly — sets both the client price and your pay on the 1:1 plans. See your compensation in section 2.13.

Level	What it means
Junior	Newer coaches building their roster.
Senior	Experienced coaches; can invite their own clients; command a higher client price.
Lead	Most senior; can invite clients, take on the most complex cases, and command the top client price.

The four client plans

Clients choose one plan when they join. It sets who coaches them and how training is delivered. The Team Plan is a flat 10 KWD/month; the three 1:1 plans are priced by the assigned coach's level.

Plan	Who coaches you	Best for
Team Plan	A head coach, shared group track	Affordable, structured group coaching
1:1 Online	Your own coach, fully online	Personalised online coaching
Hybrid	Your own coach, online + in person	In-person sessions plus online support
In-Person	Your own coach, in person	The most hands-on, in-person experience

Client price by plan and coach level (KWD/month):

Plan	Junior coach	Senior coach	Lead coach
1:1 Online	30 KWD	35 KWD	40 KWD
Hybrid	95 KWD	110 KWD	125 KWD
In-Person	145 KWD	175 KWD	215 KWD

Add-ons

On any plan a client can add one-off extras — single sessions or session packs. Nutrition (dietitian) and physiotherapy add-ons are launching soon (pending licensing).

Client account states

Knowing a client's status tells you what they can see and what they're waiting on.

Status	What it means & what you'll see
Setting up	You've started but not finished joining — the app shows your next step (finish registration, await medical review, await coach approval, or activate).
Active	Fully set up — everything is unlocked.
Grace period	A payment is overdue — you keep view access with a countdown to renew, but new session bookings pause.
Suspended / inactive	Access is locked until you renew or contact support.
Cancelled / expired	Your plan has ended — a friendly screen explains how to come back.

2 For coaches — every feature

Everything you can do as a coach, grouped by area, each with a description and steps. Notes mark anything that depends on your level (Junior / Senior / Lead) or on being a head coach.

2.1 Getting set up

Completing your coach profile

Your public profile is what clients see when choosing a coach — bio, qualifications, and specialisms.

- 1 Open My Profile.
- 2 Write your bio, add qualifications (one per line), and pick your specialization tags.
- 3 Add your photo and contact details and save — your profile then awaits admin approval.

Completing training mode

New coaches finish a short in-app video course before going live; completing it activates your account.

- 1 From your dashboard (which shows only Training + My Profile until activated), open Training.
- 2 Watch each required video, tick “I watched and understand”, and Mark as Complete.
- 3 When every required video is done, your account activates automatically.

2.2 Your dashboard

Reading your coach dashboard

A “what needs you today” home: a needs-attention banner, KPI tiles, today’s tasks, an activity feed, and your capacity.

- 1 Log in to land on your dashboard.
- 2 Start with the needs-attention banner and today’s tasks, then scan the activity feed.

Working needs-attention & today's tasks

Surfaces the most time-sensitive work — pending approvals, pending nutrition changes, missed check-ins, and quiet clients.

- 1 Read each item in the banner and task list.
- 2 Tap an item to jump straight to that client and the right tab.

Checking your capacity

Shows how full you are across each plan type so you know when you can take more clients.

- 1 Open the capacity card.
- 2 Read spots-left / at-capacity per service; a warning appears as you near full.

Checking your earnings

A current-month summary of what you’ve earned across your clients (see section 2.13 for how pay is calculated).

- 1 Read the compensation summary on your dashboard for the month-to-date total.

- 2 Open the Payouts tab in My Clients for the full per-client breakdown.

2.3 Client directory & approvals

Approving or declining a new client

New clients wait in your queue until you approve them to proceed.

- 1 Open My Clients and the Pending Approvals section.
- 2 Open the client to review their onboarding details.
- 3 Choose Approve (moves them to the next step and emails them) or Decline.

Searching and filtering your roster

Find clients fast across Pending, Awaiting Payment, Active, and At-Risk groups.

- 1 Use the search box and plan filter at the top of My Clients.
- 2 Expand or collapse sections; watch for unread-message and deload badges on each row.

Inviting a client — Senior / Lead only

Send an onboarding link that pre-assigns a new client to you.

- 1 In My Clients, choose Invite Client.
- 2 Enter their details and the plan, and send the invite.

Senior and Lead coaches only. Team-plan invites are offered to head coaches.

Adding an exempt client — Head Coach only

Create a client account that skips the standard activation step.

- 1 In My Clients, choose Add Exempt Client.
- 2 Complete the details and confirm.

Opening a client's overview

Each client has one consolidated workspace with tabbed tools.

- 1 Click any client row to open their Client Overview.
- 2 Use the secondary nav to move between tabs (see 2.4).

2.4 The client overview workspace

One page per client with eight tabs (six for dietitians — see Part 3).

Overview tab

An at-a-glance snapshot: nutrition phase, last workout, last weigh-in, a pending-adjustments nudge, and the client's deload requests.

- 1 Open the client and stay on Overview.
- 2 Read the stat tiles and act on any nudge or deload request.

Progress tab

Phase-scoped nutrition graphs plus a training volume chart.

- 1 Open Progress to review weight, body-fat, circumference, and training volume trends.

Workouts tab

The client's assigned programs, a drill-down into days/modules, a log viewer of what they actually did, and an adherence summary.

- 1 Open Workouts.
- 2 Expand a program to inspect days and modules, or open a session log to see set-by-set entries.

Sessions tab

A digest of the client's direct sessions and add-on session packs, with logging for eligible staff.

- 1 Open Sessions to see upcoming and recent sessions.
- 2 As primary coach/admin, toggle the calendar to schedule or edit; on an add-on pack, eligible staff can Log session.

Messages tab

The coach-to-client thread for that client.

- 1 Open Messages, type, and send. Edit or delete your own messages from their menu.

Care Team tab

The roster of the primary coach plus specialists, with a staff-only chat.

- 1 Open Care Team to view the team and (as primary coach/admin) add or discharge specialists.
- 2 Use the staff chat to coordinate about the client — the client can't see it.

Profile tab

Read-only demographics, subscription summary, and onboarding metadata.

- 1 Open Profile to review the client's stats and submission summary, with a link to the full medical submission.

2.5 Building programs

Available to coaches who can build programs (general coach, physiotherapist, mobility coach). The hub is Program Library with Macrocycles, Mesocycles, and Drafts.

Creating/editing a program in the calendar builder

Edit a program template in a week-by-day grid.

- 1 Open Program Library and create a new program or open an existing one.
- 2 Navigate the weeks; on a day, choose + Add session and set its title, type, and timing.
- 3 Add exercises and prescriptions (sets, reps, tempo, effort, rest) within each session.
- 4 Use the session menu to edit, copy, publish/unpublish, or delete.

Copying a week

Reuse a week's structure to build the next.

- 1 In the calendar builder, choose Copy Week.
- 2 Pick the source and target weeks and confirm.

Publishing sessions

Only published sessions deliver to clients.

- 1 Publish each session from its menu, or use Publish All to release every draft.

Building a plan on the Planning Board (muscle builder)

A drag-and-drop, multi-week planner built around muscles and sessions, with live volume and frequency analytics.

- 1 Open the Planning Board (Drafts tab) and create a plan.
- 2 On a day, add a session, then use the inline + picker to place muscles or activities.
- 3 Tune each slot's sets, reps, tempo, and effort; edit individual sets as needed.
- 4 Switch week tabs to plan multiple weeks; watch the volume, frequency, and progression panels.
- 5 Optionally add a deload week, save as a draft or preset, and attach recommended videos.

Converting a plan into a program

Turn a finished Planning Board plan into a deliverable program.

- 1 In the Planning Board, choose Create Program.
- 2 Confirm the details — IGU builds the program, auto-filling exercises where a slot has none.

Assigning a program

Deliver a published program to a client or a whole team.

- 1 From the program, choose Assign.
- 2 Pick a client (or team) and a start date and confirm.

Head Coach: team assignment fans the program out to every active member at once.

Chaining macrocycles

Connect several programs into a longer (months-long) training arc.

- 1 Open the Macrocycles tab.
- 2 Create a macrocycle and add programs in sequence; open any member to edit it.

Dietitians cannot build or assign programs — the Programs area shows a subrole notice for them.

2.6 Nutrition coaching

On the client's Nutrition tab. Editable when you have permission; read-only if a dietitian leads that client (see Part 3).

Setting a nutrition phase

Set the client's calorie target and macros, with the math handled for you and demographics pre-filled.

- 1 Open the client's Nutrition tab → Overview.
- 2 Adjust the pre-filled age/gender/height/weight if needed, set the goal type and rate, and save the phase.

Making weekly adjustments

Raise or lower calories week to week based on progress.

- 1 Open the Adjustments inner tab.
- 2 On a week card, choose Increase or Decrease, set the amount and notes, and apply.

Scheduling a diet break or refeed

Plan short, structured food increases.

- 1 In Adjustments, use the Diet break or Refeed controls.
- 2 Set the dates and confirm.

Approving or rejecting a client's adjustment request

Review changes the client requested before they take effect.

- 1 In Adjustments, find the pending request with its macro-delta preview.
- 2 Choose Approve or Reject.

Reviewing graphs and leaving notes

Track long-run progress and keep private coaching notes.

- 1 Open the History inner tab.
- 2 Review the weight/body-fat/circumference graphs and add notes in the notes panel.

2.7 Sessions & availability

Publishing your availability

Create the slots clients can book.

- 1 Open Sessions → Manage Time Slots.
- 2 Add a slot: date, start time, duration, count, type, and location.
- 3 Toggle slots available or blocked as needed.

Managing client bookings

Handle the sessions clients have booked with you.

- 1 In Sessions, open Upcoming Sessions.
- 2 Mark a session Complete, or Cancel it if needed.

2.8 Teams — Head Coach only

Head coaches run up to three group coaching tracks. Non-head-coaches see a "Head Coach role required" message here.

Creating a team

Start a new group coaching track.

- 1 Open My Teams and choose Create Team.
- 2 Set the name, tags, max members, and description, and save.

Assigning or changing a team's program

Deliver one program to the whole team.

- 1 Open the team's detail view.
- 2 Choose Assign Program (or Change Program), preview the calendar, and confirm — it fans out to active members.

Managing team members

See and manage who is on the team.

- 1 In the team detail view, review the member list.
- 2 Members join or move via the client-side team picker; manage the roster here.

Deleting a team

Remove a team you no longer need.

- 1 In the team detail view, choose Delete and confirm — members are safely detached for reassignment.

2.9 Content assignment

Assigning content to a client

Push specific educational videos or learning paths to clients.

- 1 From Educational Videos, open a video and choose Assign to client (or use the linked-content list on the Nutrition tab).
- 2 Pick the client and set a due date if needed.

Tracking assigned content

See who has watched what.

- 1 Open Assigned Content.
- 2 Review each assignment's status, due date, and completion; remove one if it's no longer needed.

2.10 Care team & specialists

Adding a specialist to a client — Primary coach / admin

Bring a dietitian, physio, or other specialist onto a client's care team.

- 1 Open the client's Care Team tab and choose Add specialist.
- 2 Search active coaches by specialty and set their scope (full or view-only).
- 3 Confirm.

Discharging a specialist

Remove a specialist at the next renewal.

- 1 In the Care Team tab, choose Discharge on the specialist and confirm.

Managing your own specialist assignments

See the clients where you're a specialist (not the primary coach).

- 1 Open My Assignments.
- 2 Review your specialty and scope per client; use End at renewal to step off a client.

2.11 Deload requests

Responding to a client's deload request

Approve and schedule a recovery week, or decline with a reason.

- 1 Open the client's Overview tab (or use the dashboard badge).
- 2 In the deload panel, choose Approve (pick a preset, optional week, and message) or Decline (add a reason — the client gets a short cool-off).

2.12 Exercise library & profile

Browsing exercises

A searchable library of exercises with video previews, used as a reference and inside the builders.

- 1 Open Exercise Library.
- 2 Search or filter by muscle, equipment, or category, and open an exercise to preview its video.

Editing your profile

Keep your public profile and private contact details current.

- 1 Open My Profile.
- 2 Update your photo, bio, qualifications, specializations, contact details, and social links, and save.

2.13 Your compensation

You're paid a share of each client's monthly price. Because the 1:1 prices rise with your level, levelling up raises both the price you command and your pay — your earnings and IGU's margin grow together.

Per client, per month, on the 1:1 plans:

Plan	Junior	Senior	Lead
1:1 Online	17 KWD	24 KWD	30 KWD
Hybrid	70 KWD	88 KWD	105 KWD
In-Person	107 KWD	141 KWD	183 KWD

Team Plan pays the head coach a flat **6 KWD** per member per month. Your dashboard shows a live month-to-date total, and the Payouts tab breaks it down per client.

How your level moves your pay

Each 1:1 tier has a Junior, Senior, and Lead price, and you're paid a fixed share of it. Moving up a level raises the client price and your pay together. Promotions are based on certifications, tenure, retention, and client results.

Guardrails

Every subscription keeps a minimum IGU margin, and discounts are capped (up to 30%, shared proportionally) — so pay and margin stay balanced. Your admin can explain any blocked or discounted case.

Coming soon

Retention and adherence bonuses, a referral bonus, and head-coach profit-share are being finalised. Compensation for the upcoming nutrition and physiotherapy add-ons (planned around 21 KWD per nutrition client and 33 KWD per physio client, per month) will be confirmed when those add-ons launch.

3 For dietitians

A dietitian is a nutrition specialist. You hold a coach account with an approved Dietitian credential, so your app is focused on nutrition. This part explains everything specific to your role; for shared tools (messaging, the client overview, your profile) the coach steps in Part 2 also apply.

Nutrition is an add-on launching soon

Dietitian-led nutrition is rolling out as an optional add-on a client attaches to their plan (pending licensing). This part describes how your role works so you're ready at launch; the add-on's pricing and pay will be confirmed then.

3.1 How you join a client's care team

You don't pick up clients from a general queue. A client's primary coach (or an admin) adds you to that client's care team when the client has the nutrition add-on. Once added, that client appears in your lists.

You lead nutrition

When you're assigned to a client, you are the source of truth for their nutrition. The client's general coach is automatically switched to read-only on nutrition, so guidance never conflicts.

3.2 Your dashboard

Reading the dietitian dashboard

A nutrition-focused home rather than the full coaching overview.

- 1 Log in to see your tiles: Active Phases, Pending Adjustments, and Drifting Clients (those who haven't weighed in lately).
- 2 Work the Today's Tasks list and review Recent Weigh-ins.
- 3 Tap any client to open straight into their Nutrition tab.

3.3 Your nutrition clients roster

Using the Nutrition clients list

A dedicated roster of every client you're assigned to, bucketed by what needs action.

- 1 Open Nutrition clients from the sidebar.
- 2 Scan the buckets: Action needed, Active phases, Drifting, and Ended/paused.
- 3 Each row shows the phase, goal, last weigh-in, and pending-adjustment count; open one to act.

3.4 The client overview (your view)

Your client overview has six tabs and defaults to Nutrition. The Workouts and Sessions tabs are hidden because training isn't your area. You keep Overview, Progress, Nutrition, Messages, Care Team, and Profile.

3.5 The full nutrition workflow

Setting a client's nutrition phase

Define the calorie target and macros for a goal block, with the math handled and demographics pre-filled.

- 1 Open the client's Nutrition tab → Overview.
- 2 Confirm or adjust the pre-filled age, gender, height, and starting weight.
- 3 Choose the goal type (fat loss / maintenance / muscle gain) and the target rate.
- 4 Save — the phase becomes the client's active targets.

Making weekly adjustments

Tune calories up or down each week based on the client's actual progress versus the plan.

- 1 Open the Adjustments inner tab.
- 2 On the relevant week card, choose Increase or Decrease, enter the amount and a note, and apply.
- 3 The client sees their new targets immediately.

Scheduling diet breaks & refeeds

Plan structured higher-calorie periods to support adherence and recovery.

- 1 In Adjustments, use the Diet break or Refeed scheduler.
- 2 Set the dates and confirm.

Handling client adjustment requests

Approve or reject changes a client requested before they take effect.

- 1 In Adjustments, open a pending request and review its macro-delta preview.
- 2 Choose Approve or Reject.

Reviewing progress & recommending steps

Use graphs and step recommendations to guide the plan.

- 1 Open History for weight, body-fat, and circumference graphs.
- 2 Set or review step recommendations where shown.
- 3 Add private notes for the care team in the notes panel.

Reviewing the weekly check-in

Read the client's weekly self-report to inform your next adjustment.

- 1 Open the client's nutrition data and read their latest weekly check-in (adherence, changes, notes).
- 2 Adjust targets if needed.

3.6 Communicating

You message the client directly in the shared **Messages** thread (alongside the rest of their care team), and you coordinate privately with the other staff in the **Care Team** tab's staff-only chat, which the client can't see.

3.7 What's different for you

- You can't build or assign training programs — the Programs area shows a notice.
- Workouts and Sessions tabs are hidden on the client overview.
- On mobile your dock swaps Programs for Nutrition clients.
- Your professional level (Junior / Senior / Lead) is set by admin.

4 For physiotherapists & other specialists

Physiotherapists, sports psychologists, and mobility coaches are specialist credentials added to a client's care team. This part focuses on the physiotherapist role in detail, then summarises the others. Shared tools (messaging, client overview, profile) follow the coach steps in Part 2.

Specialist add-ons launching soon

Physiotherapy and the other specialist add-ons are rolling out soon (pending licensing). This part describes how the role works so you're ready at launch; the add-on's pricing and pay will be confirmed then.

4.1 The physiotherapist role

As a physiotherapist you focus on injury, rehabilitation, and movement quality. You can do everything a training coach can in terms of programming, plus record injury-assessment notes. You join a client's care team rather than taking clients from a general queue.

You can	You cannot
Build and assign training/rehab programs	Lead nutrition (that's the dietitian/coach)
Record injury-assessment notes	Run team plans (unless you're also a head coach)
Use the full program builder & Planning Board	See clients you haven't been assigned to
Message the client and the care team	Access the admin area

4.2 How you join a client

Being added to a care team

A client's primary coach or an admin adds you as a specialist, with a scope of full (can edit) or view-only.

- 1 The primary coach opens the client's Care Team tab and adds you, choosing your scope.
- 2 The client now appears in your My Assignments list.
- 3 Open the client to begin working.

Using My Assignments

Your list of clients where you're a specialist.

- 1 Open My Assignments.
- 2 Each row shows your specialty and scope (Full or View only).
- 3 Open a client, or use End at renewal to step off.

4.3 Building rehab programs

Programming for a client

You use the same program tools as a coach to build and assign rehab or training plans.

- 1 Open Program Library or the Planning Board.
- 2 Build the plan day by day (sessions, exercises, sets, reps, tempo, effort).
- 3 Publish and assign it to your client with a start date.

This requires full scope. If you were added view-only, you can review but not edit — ask the primary coach to widen your scope.

4.4 Injury assessment notes

Physiotherapists hold permission to record injury-assessment notes on a client, which the care team can see. Use these to document findings, restrictions, and rehab guidance so the coach programs around them. Notes are part of the client's care record — keep them factual and relevant.

4.5 Communicating

Message the client in the shared **Messages** thread and coordinate privately with the other staff in the **Care Team** staff chat. Flag any movement restrictions to the primary coach so the training plan respects them.

4.6 Other specialists

Sports psychologist

Focuses on mindset, motivation, and performance. Joins the care team like any specialist, communicates through the same threads, and can record sports-psychology notes. Does not build training programs.

Mobility coach

Focuses on flexibility and movement quality. Can build and assign programs just like a training coach, and joins clients through the care team.

Holding more than one credential

A coach can hold several approved credentials at once (for example coach + physiotherapist). Your app then combines all the capabilities those credentials grant.

5 How roles & plans change what you see

The same app adapts to your role. Here's a side-by-side of the differences.

By role

What changes	General coach	Dietitian	Physiotherapist	Head coach
Dashboard	Full coaching overview	Nutrition-focused	Coaching overview	Coaching + teams
Build programs	Yes	No	Yes	Yes
Lead nutrition	If no dietitian	Yes	No	If no dietitian
Team plans	No	No	No	Yes (up to 3)
Client overview tabs	All 8	6 (nutrition-first)	All 8	All 8
Invite clients	Senior/Lead only	Senior/Lead only	Senior/Lead only	Yes

Client plans, for context

A client's plan decides who is on their care team and how their nutrition is handled.

Plan	Who coaches you	Best for
Team Plan	A head coach, shared group track	Affordable, structured group coaching
1:1 Online	Your own coach, fully online	Personalised online coaching
Hybrid	Your own coach, online + in person	In-person sessions plus online support
In-Person	Your own coach, in person	The most hands-on, in-person experience

6 Frequently asked questions

Getting started as a coach

“Why can't I access the platform yet?”

New coaches complete a short in-app training course first. Finishing all required videos activates your account automatically.

“How do I get more clients?”

Senior and Lead coaches can invite clients directly; otherwise clients are assigned to you and appear in My Clients.

“How do I complete my profile?”

Open My Profile, add your bio, qualifications, and specialisms, and save — it then awaits admin approval.

Coaching & communication

“How do I message a client?”

Open the client's Messages tab (or the client appears in your threads). Your whole care team shares one thread per client.

“A client has a dietitian — why can't I edit their nutrition?”

When a dietitian is on the care team they lead nutrition, so your nutrition controls become read-only for that client. You still manage everything else.

“How do I add a specialist to a client?”

From the client's Care Team tab, choose Add specialist, pick the person and scope, and confirm.

“How do I respond to a deload request?”

Open the client's Overview tab and use the deload panel to approve (with a preset and message) or decline (with a reason).

Programs & nutrition

“What's the difference between the calendar builder and the Planning Board?”

The calendar builder edits a program week-by-day; the Planning Board is a drag-and-drop muscle-and-session planner with live analytics that you convert into a program.

“Why isn't my program showing for the client?”

Only published sessions deliver. Publish each session, or use Publish All, then assign the program with a start date.

“How do I assign a program to a whole team?”

Head coaches choose Assign Program on the team; it fans out to every active member at once.

Pay & levels

“How am I paid?”

You earn a share of each client's monthly price. On the 1:1 plans the price — and your pay — rises with your level (Junior, Senior, Lead). The Team Plan pays the head coach a flat fee per member. See section 2.13 for the per-level table.

“Does a client pay more if I'm a senior coach?”

Yes — on the 1:1 plans the client price is set by your level, so a Senior or Lead coach commands a higher price (and higher pay) than a Junior. The client sees the price before they confirm.

“How do I level up?”

Promotions are based on certifications, tenure, client retention, and results, and are set by admin. Moving up raises both your share and the price you command.

“When do specialist add-ons (nutrition/physio) pay out?”

Those add-ons are launching soon; their pricing and pay are being finalised and will be confirmed at launch.

For dietitians & physiotherapists

“How do I get clients as a dietitian or physio?”

You're added to a client's care team by their primary coach or an admin — you don't pick from a general queue. Assigned clients appear in your lists.

“As a dietitian, why can't I see Workouts or Sessions?”

Those tabs are hidden for dietitians because training isn't your area; your overview focuses on nutrition.

“As a physio, why can't I edit a program?”

You were likely added with view-only scope. Ask the primary coach to widen your scope to full.

“Can I hold more than one credential?”

Yes — for example coach + physiotherapist. Your app combines all the capabilities those credentials grant.

7 Glossary of IGU terms

Plain-language definitions of the words you'll see around IGU.

Term	What it means
Care team	Everyone coaching a client — the primary coach plus any specialists (dietitian, physio, etc.).
Subrole / specialist	An approved credential (dietitian, physio, sports psychologist, mobility coach) that grants extra capabilities.
Level	A coach's seniority — Junior / Senior / Lead — set by admin.
Head coach	A senior coach who leads team plans.
Care team scope	Whether a specialist can edit (full) or only view (view-only) a client.
Phase	A block of a client's nutrition plan with a goal and its own targets.
Macros	Macronutrients — protein, carbohydrates, and fat — and the daily targets for each.
Adjustment	A weekly change to a client's calories/macros based on progress.
Diet break / refeed	Short, planned higher-calorie periods during a fat-loss phase.
Deload	A planned lighter recovery week in a training plan.
RIR / RPE	Effort measures. RIR = reps in reserve; RPE = rate of perceived exertion.
Tempo	How fast each rep is performed.
Program / mesocycle	A training plan over a block of weeks.
Macrocycle	A longer arc (months) made of several connected programs.
Planning Board	The drag-and-drop muscle-and-session planner used to design programs.
Preset	A saved set of prescription columns a coach reuses across programs.
Team plan	A group coaching track led by a head coach.
Add-on	An optional extra (session, pack, or specialist) a client adds to their plan.
PAR-Q	The client's health-readiness questionnaire completed at sign-up.

8 Getting help

Getting help

- **Check the client's status** — much of what you can do for a client depends on their account status and plan; their overview shows both.
- **Use the care-team chat** — coordinate with other staff on a client privately from the Care Team tab.
- **Contact admin/support** — for approvals, credentials, level changes, or anything platform-related, use your usual admin contact.

Quick troubleshooting

- **Can't see a client?** You only see clients assigned to you (or where you're on the care team).
- **Can't build programs?** Program building needs the right credential (coach, physio, or mobility coach).
- **Nutrition is read-only?** A dietitian is assigned to that client and leads nutrition.
- **Teams area locked?** Team plans are for head coaches.

Welcome to the unit

That's the full tour of your coaching tools. Your dashboard always surfaces what needs you next — start there each day.
